

Powered Loudspeakers

- Next generation active loudspeakers incorporating high performance DSP and ultra-precise Class-D amplifiers
- Digital FIR-X tuning provides the smoothest possible frequency and phase response
- High performance 48-bit processing for high definition sound quality
- D-Contour multiband dynamic processing provides the ideal balance of dynamic sound and consistent clarity at any output level
- High-efficiency 1100W Class-D amplifiers produce an impressive SPL up to 133dB
- Intelligent on-board 3 channel mixer
- Symmetrical enclosure design and special Monitor mode improves stage monitor performance
- Superior components with custom designed transducers and constant directivity horns
- Durable, lightweight ABS enclosures
- Versatile mounting options include dual-angle pole socket, rigging points and optional professional U-Brackets
- A choice of four different speaker sizes and optional DXS-series subwoofers complete the range
- DXR is the result of collaboration with loudspeaker giant NEXO

THE YAMAHA ADVANTAGE

As a result of working closely with NEXO's engineers at their state-of-the-art facility, the Yamaha DXR team adopted a new approach to some crucial aspects of these speakers' design. The detailed analysis of the transducers, thorough testing of the enclosures' acoustic properties and optimized limiter setting all contributed to higher SPL delivered with stunning clarity and an unsurpassed level of reliability. By incorporating touring-grade technology into these speakers, we've succeeded in creating the most powerful and dependable high-performance, active loudspeakers...ever.
